

## **Hottest Solar LED Landscaping Lighting You Need Now**

Solar landscaping lighting is a luxury that adds a certain level of customization to your home. At Modernize, we love the aesthetic of integrated solar LED landscaping lighting. How do you begin to create a solar lit space at your home? With solar lanterns, solar accents, solar paver lights, and solar Bollard lights, the exterior of your home will be looking magazine worthy soon.

### **Solar Lanterns**

Via [Solar Lighting Inc.](#)

Solar lanterns are beautiful in the day and in the night. These outdoor lighting fixtures can stay illuminated for up to twelve hours after a sunny day. Self contained solar lanterns from Solar Lighting Inc. have the light color option of warm white or cool white. The glow these lights create is needed in the front of a home on the porch or in the back yard. Anchored into concrete, the solar lanterns work their magic as soon as the evening hits, giving your backyard a magical feel. A lot of customers enjoy using these around inground pools.

### **Solar Accents**

Via [Solar Lighting Inc.](#)

Solar accent lights are different than lanterns. They can be installed within poured concrete. These little lights are used “to highlight the character of a outdoor space using precise placement and pointed accenting in a landscape or facade.” Think of small lights that come in different colors accenting the ground in a backyard veranda. Solar Lighting Inc. offers these solar accents in different colors including warm white, cool white, green, red, and blue. Along with the options of different colored lighting, the solar accents can be ordered to produce a steady light, flashing light, or slow flashing light. This type of solar light allows you to use your creativity and add some sparkle to a surface like rock, wood, concrete, or paving stones. You don’t have to worry about the lights being stepped on and cracking. Accents lights from Solar Lighting Inc. are extremely high quality and can withstand the compression of any passenger vehicle driving across them. This also means that stepping on the lights isn’t remotely a problem. Don’t compare these lights with cheap stake-in-the-ground alternatives. They’re designed to last and last. The best part? They’re maintenance free and can be illuminated for up to twelve hours!

### **Solar Paver Lights**

Via [Solar Lighting Inc.](#)

When walking along a concrete path have you ever noticed lights that are built-in seamlessly? These lights not only look beautiful, but they create a safe, illuminated walkway for pedestrians. You can add solar paver lights to your own home with Solar Lighting Inc. Whether you have a concrete patio, driveway, or pool deck that you'd like to incorporate lighting into, this process is incredibly simple. Without spending a lot of time or money, your home will look styled and savvy. Pavers come in all different shapes, sizes, and colors to meet your need. Shapes offered from Solar Lighting Inc. include rectangles, squares, and circles. To make the process even better, you can pick from colored lights. Warm white, cool white, blue, green, red, yellow, and a variety light are all available. Pulling into your driveway has never been easier with paver lights welcoming you home in the evening. The lights have a IP rating of 68. This magical rating describes how well protected the fitting is. A good comparison is an IP of 6. This IP protects lights from powerful waterjets. At 68, you can only imagine what protection these tough lights offer. They are suitable to be installed underwater (like in a pool or on docks) and they don't need maintenance. Both the paver lights and the accent lights described earlier are designed with capacitors to store solar energy. Unlike battery-operated solar lights, these function great in cold weather and can withstand -40 degrees without any degradation in performance. Not having to

worry about replacing batteries or replacing the solar lights themselves is one of the best benefits of investing in the Solar Lighting Inc. line of products!

### **Solar Bollard Lights**

Via [Solar Lighting Inc.](#)

Bollard Lights are stand alone solar lights that are taller than other offerings. These lights are cylindrical in shape and have four lenses which let off light. You may see them integrated in landscaping at warm weather resorts. The main solar light on the bollard is a 9 high output white LED. Other lights that accent it are three smaller narrow lights with blue LEDs. In addition to incorporating Bollard lights into landscaping, these lights work well alongside a dock's edge. Their presence works as a light in the evening and a type of visual pathway during the way. You may also notice solar Bollard lights installed alongside a fence or wall. In the evening, they help illuminate the area and keep cars from hitting the blocked off space. Just a few of these lights make a great impact and look nice in home landscaping. Solar Lighting Inc. sells a Bollard light that is installed by mounting the base into the ground and a Bollard light that is installed by mounting the light on any horizontal solid surface with a supplied base plate and three anchor bolts. The Bollard solar lights can provide illumination for a minimum of twelve hours if given enough sunlight.
